

# HAZARD RATIO FOR MORTALITY WITH A CIED INFECTION\*

## PATIENT MEDICATIONS

Corticosteroids	1.97
-----------------	------

## PATIENT CHARACTERISTICS

Systemic Embolization	7.11
-----------------------	------

Abnormal Right Ventricle Function	3.59
-----------------------------------	------

Abnormal Renal Function	2.98
-------------------------	------

Heart Failure	2.01
---------------	------

Acute Renal Failure	1.94
---------------------	------

Some patient medications and patient characteristics significantly increase the risk of death once an infection is present.
